

Model your civil case to evaluate it qualitatively and quantitatively.

- Build a **visual model** to analyze and value your case.
- Identify and organize the **important legal issues** to be decided in the case.
- Estimate the **likelihood of decisions** on each legal issue.
- Estimate the **financial consequences** of each model scenario based on issue decisions.
- Analyze the model to calculate the **expected value** of the overall case and **risk** associated with individual scenarios.

TreeAge Pro makes it easy to model your case and share your analysis.

- **Build models quickly** and easily with the legal wizard and the visual editor.
- **Calculate** the overall **value of the case** based on the likelihoods and financial consequences of all possible model scenarios.
- **Assess financial risk** with a graphical summary of all model scenarios.
- **Share your model** and results with clients and colleagues in a simple PDF format or over the web.

Build Your Model

- Create a model in a few easy steps with the Legal Model-Building Wizard.

- Edit your model within the visual model editor.
- Add probabilities for each ruling within the model.
- Add financial consequences for each model scenario.

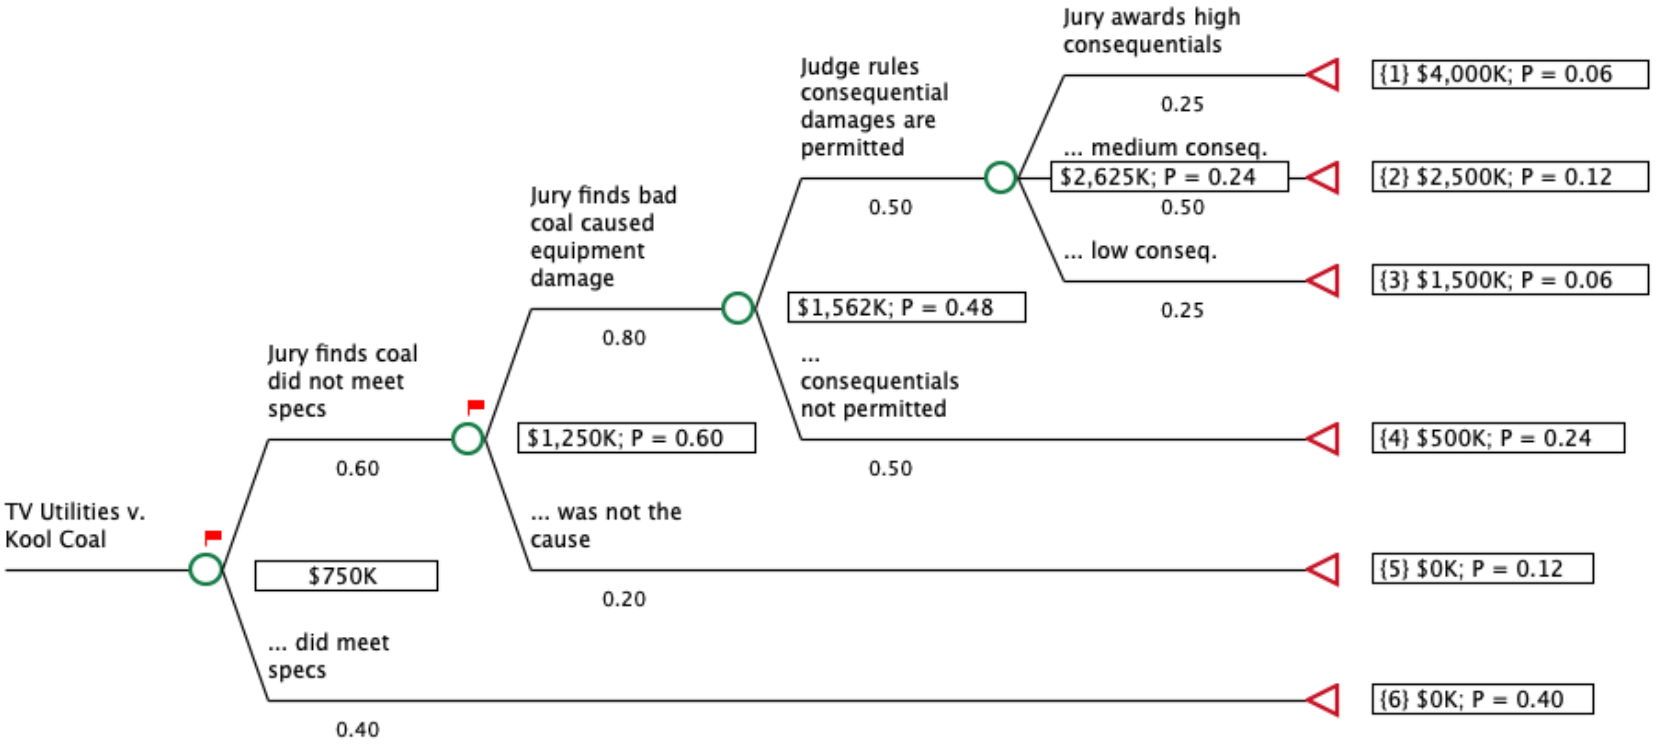

- Review the visual model with clients so they can fully understand how the case could be decided, including potential risks.

Calculate the Model

- Calculate the value of the case based on the financial consequences and likelihood of all model scenarios.

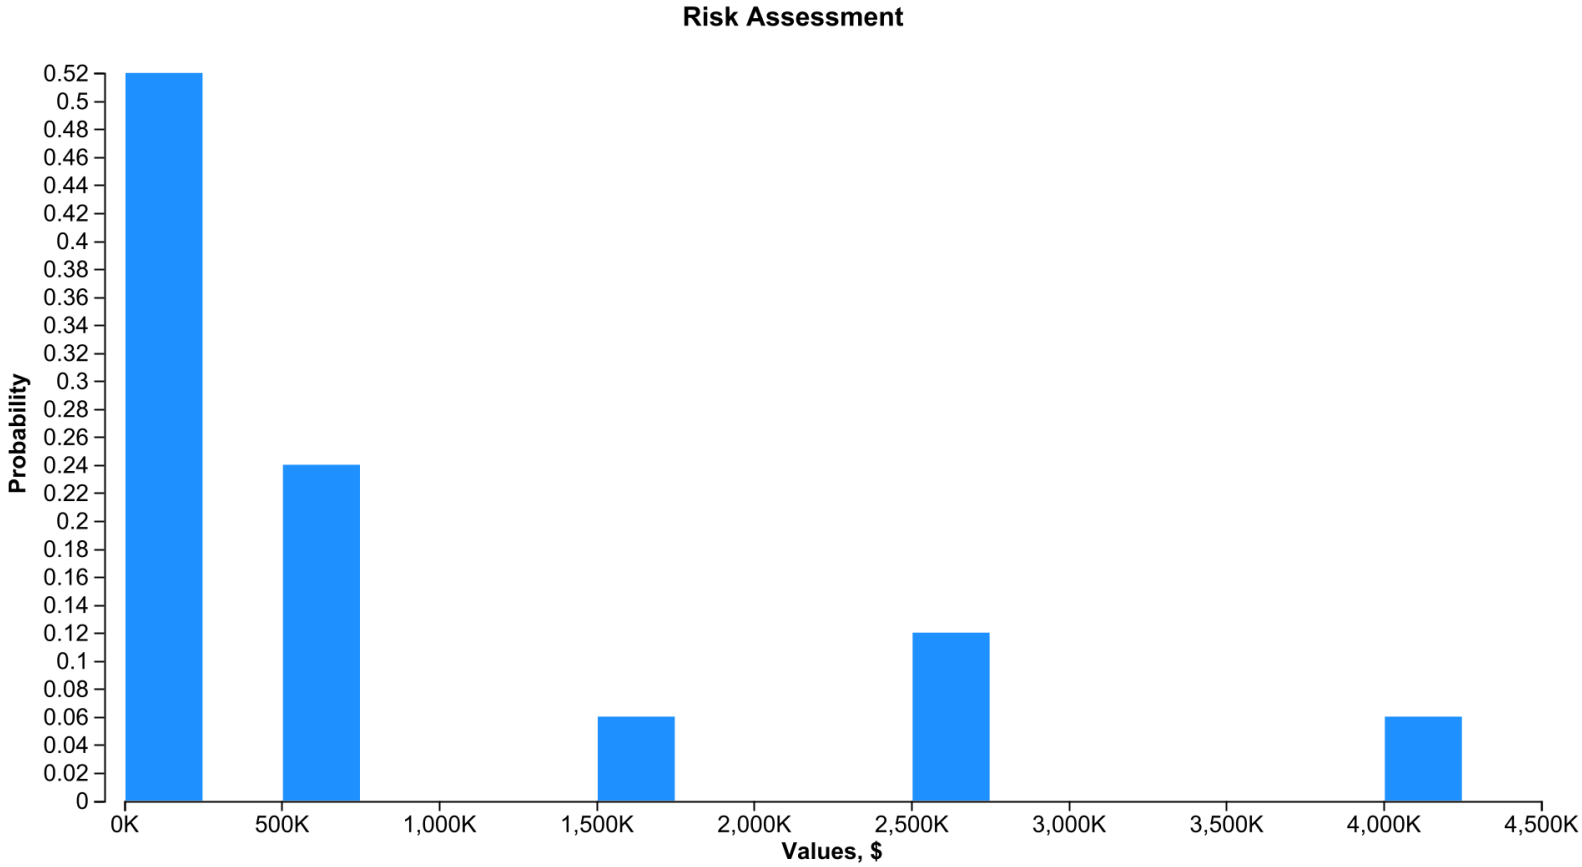

- This may represent a good start for settlement negotiations.
